Sequence 167, Application US/09240274

Sequence 167, Application US/09240274

Patent No. 625455

GENERAL INFORMATION:

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: USBER: US/09/240,274

CURRENT PILLING DATE: 1999-01-29

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,550

EARLIER PILLING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 167

LENGTH: 108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3 QMTQSPSSLSASVGDRVTITCRASQSISNYLNWYQQKPGKAPKLLIYGASSLQSGVPSRF

New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.

claim 3, SEQ ID NO 14; 78pp; English

The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to WCOSH. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUCIS on the pancreatic or condition associated with the articularly cervical pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intraepithelial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUCIS monoclonal antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel monoclonal antibody used for inhibiting tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a menoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody light chain, variable region,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanome or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting or inhibiting tumour metastasis. The method is useful for inhibiting or inhibiting or inhibiting action in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence represents a light chain from an MUC18 tumour antigen-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60
                                                                                                      9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DIQMTQSPSSLSASVGDRVTITCRASQGIRNDLGWYQQKPGKAPKRLIYAASSLQSGVPS

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 DIQMIQSPSSLSASVGDRVIITCRASQGIRNDLGWYQQKPGKAPKRLIYAASSLQSGVPS 60

monoclonal antibody; carbonic anhydrase IX; CA IX tumour antigen; cytostatic; colorectal neoplasm; renal cell carcinoma; cervical intraepithelial squamous neoplasia; cervical intraepithelial glandular neoplasia; oesophageal; breast cancer; gene therapy; murine; mouse; human; light chain variable domain.
               The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188. O 99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                  Murine-expressed anti-human CA IX monoclonal antibody VL protein -SEQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                  The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0 99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.

The invention relates to a novel isolated monoclonal antibody (Mab) comprising a heavy chain polypeptide and light chain polypeptide having a sequence chosen from one of 53 fully defined amino acid sequences given in the specification, where the antibody specifically binds carbonic anhydrase IX (CA IX) tumour antigen. The antibody of the invention anhydrates cyrostatic activity and may be useful for treating a tumour, such as colorectal neoplasm, renal cell carcinoma, cervical intraepithelial squamous and glandular neoplasia, oesophageal
                                                                                                                                                                                                                                  New anti-CA IX monoclonal antibody, useful for treating a tumor e.g., colorectal neoplasms, colorectal tumors, cervical carcinoma, cervical intraepithelial squamous and glandular neoplasia or esophageal tumors.
Gallo M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 3; SEQ ID NO 51; 89pp; English
```

New human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D), useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer.

WPI; 2003-587119/55.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described: (1) a method of freating nephritis; (2) a method of treating nephritis; (3) a method of treating mesangial cell proliferation; and (4) a method of treating mesangial proliferative glomerulonephritis. The antibody has nephrotropic, antinflammatory, dermatological, immunosuppressive and antidiabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesangial proliferative glomerulonephritis. The present sequence represents a human
tumour or breast cancer, possibly via gene therapy. The current sequence is that of a muriane-expressed anti-human CA IX monoclonal antibody VL (light chain variable domain) protein of the invention. The protein was generated via the introduction of the human CA IX protein into a
                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                 9

The present invention describes a human monoclonal antibody (I) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises: (a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (SI, ADP22417) or (S2, ADP22421), and (b) a light chain CDR1 having the two fully defined 11 amino acid esquence (S3, ADP22418) or (S4, ADP22424). Also described: (I) assaying (MI) the level of TNFa in a patient sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNFa in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ovarian cancer;
                                                                                                                                                                          New recombinant human monoclonal antibody that specifically binds to
Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such
as cancers, or immuno-mediated inflammatory diseases such as rheumatoid

The Bamples; (2.) a composition compitating the animal suffering from a neoplastic, or an immuno-mediated inflammatory disease by selecting an animal in need of treatment for the disease by administering the human monoclonal antibody of (1); and (4) inhibiting (M3) TNPa induced apoptosis in an animal by selecting an animal in need of treatment for the disease by administering the human monoclonal antibody of (1); and (4) inhibiting (M3) TNPa induced apoptosis by administering the human monoclonal antibody of (1); and interest in an animal by selecting an animal in need of treatment for TNPa induced apoptosis, nephrotropic, antiarterioscalerotic, antiarthritic, antiarterioscalerotic, antiarthritic, antiarterioscalerotic, antiarthritic, antiarterioscalerotic, antiarthritic, antiarteriorotic antiarthritic, reuroprotective, vasotropic and antiapoptosis, nephratropic and antiapoptosis, neoplastic disease such as TNPa antagonist. The antibody (1) is useful in the preparation of medicament for treating TNP induced apoptosis, neoplastic disease such as breast cancer, ovarian cancer, bladder cancer, lung cancer, glioblastoma, stomach cancer, endometrial cancer, bladder cancer, only attritis, glomerulonephritis, atherosclerosis, psoriasis, restenciosis, antionmune disease, Crohn's disease, graft-host reactions, septic shock, cachexia, anorexia, and multiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the

The present invention describes a human monoclonal antibody (1) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined and acid sequence (S1, ADP22417) or (S2, ADP22421);

c two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421);

c the sign and the lavel of TNFa in a patient sample, comprising contacting with (I), and detecting the lavel of binding between the antibody and TNFa in the sample; (2) a composition comprising the antibody or its functional fragment and a carrier; (3) treating (M2) an animal suffering from a neoplastic, or an immuno-mediated inflammatory disease by selecting an animal in need of treatment for the disease by administering the human concolonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering cartivities, anticreparation of antibacterial, antiinflammatory, antipsoriatic, antirheumatic, eatingmatory as TNFa antibody (I); and antippoptotic activities, and can be used as TNFa antibacterial and antippoptosis, neoplastic disease such as rheumatoid architis, glomerulonephritis, and antipposis, paorians cancer, induced apoptosis, neoplastic diseases such as rheumatoid arthritis, glomerulonephritis, and antippositions and antippositi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

Example 10; SEQ ID NO 273; 213pp; English.

The present live interaction describes a numan monocloust and the present live interactions and monocloust and the present live interactions and monocloust and the present live interactions and monocloust and the following the two fully defined 1 amino acid sequence (81, ADP2241); and (b) a light chain CDR1 having the two fully defined 11 amino acid cand (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (83, ADP22418) or (84, ADP22424). Also described: (1) assaying (MI) the level of TYRE in a patient sample, comparising contacting with (1), and detecting the level of binding between the antibody and TYRE in the sample; (2) a composition comprising the antibody or its functional fragment and a carrier; (3) treating (M2) an animal suffering the human composition comprising the antibody or (1), and detecting the level of treatment for the disease by administering the human monoclonal antibody of (1); and (4) inhibiting (M3) TYRE induced apoptosis by administering the human monoclonal antibody of (1). (1) has anabolic, antiarteriosclerotic, antiarthritic, antibody of (1). (1) has anabolic, antiarteriosclerotic, antiarthritic, antibody of disease such as TYRE antagonist. The antibody (1) is useful in the preparation of medicament for treating TYRE induced apoptosis, neoplastic disease such as a TYRE antagonist. The antibody (1) is useful in the preparation of medicament for treating TYRE induced apoptosis, neoplastic disease such as theumatoid arthritis, glomerulonephritis, atthemetic cancer, ovarian cancer, bladder cancer, colon cancer, colon cancer, colon cancer, cancer, breast cancer, cancer, such as theumatoid arthritis, glomerulonephritis, and disease such as theumatoid arthritis, glomerulonephritis, and disease, graft-host reactions, septic shock, cachexia, anorexia, and cantibody light chain variable region, which is used in the expension of the present invention. present invention describes a human monoclonal antibody (I) that

New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid arthritis.

Example 10; SEQ ID NO 208; 213pp; English.

The present invention describes a human monoclonal antibody (I) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises: (a) a heavy chain complementarity determining region I (CDRI) having the two fully defined 5 amino acid sequence (SI, ADP22417) or (S2, ADP22421); and (b) a light chain CDRI having the two fully defined 11 amino acid sequence (SI, ADP22418) or (S4, ADP22424). Also described: (I) assaying (MI) the level of TNPa in a patient sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNPa in the sample; (2) a composition comprising the antibody and TNPa in coplastic, or an immuno-mediated inflammatory disease by selecting an enoplastic, or an immuno-mediated inflammatory disease by selecting an enoplastic, or an immuno-mediated inflammatory disease by selecting an enoplastic or an immuno-mediated inflammatory disease by selecting an enoplastic antianal by selecting an animal in need of treatment for the disease by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNPR induced apoptosis by administering the human monoclonal antibody of (I). (I) has anabolic, antiarteriosclerotic, antiarthritic,

```
disorders, immunomodulator, immunosuppressive, nephrotropic, neuroprotective, vasotropic and antiapoptotic activities, and can be used as a TWB antagoomist. The antiabody (1) is useful in the preparation of medicament for treating TWP induced apoptosis, neoplastic disease such as breast cancer, ovarian cancer, bladder cancer, lung cancer, glioblastoma, pancreatic cancer, andometrial cancer, kidney cancer, colon cancer, pancreatic cancer, and prostrate cancer; or immuno-mediated inflammatory diseases such as rheumatoid arthritis, glomerulonephritis, atherosclerosis, psoriasis, restenosis, autoimmune disease, Crohn's disease, graft-host reactions, septic shock, canchexia, and multiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

New recombinant human monoclonal antibody that specifically binds to

2004-480601/45.

N-PSDB; ADP22097.

Qiaojuan JS;

The present invention describes a human monoclonal antibody (I) that specifically binds to tumour necrosis factor-alpha (TNPa) and comprises:

(a) a heavy chain complementarity determining region I (CDRI) having the two fully defined 5 amino acid sequence (SI, ADP22417) or (S2, ADP22421);

c two fully defined 5 amino acid sequence (SI, ADP22417) or (S2, ADP22421);

and (b) a light chain CDRI having the two fully defined 11 amino acid sequence (S3, ADP22418) or (S2, ADP224218) or (S2, ADP24 human, monoclonal antibody; tumour necrosis factor-alpha; TNFa; antibody; anabolic; antiarteriosclarcic; antiarthritic; antibacterial; antiinflammatory; antipocriatic; antirheumatic; eating-disorder; immunomodulator; immunosuppressive, nephrotropic; neuroprotective; vasotropic; antiapoptotic; TNFa antagonist; TNF induced apoptosis; neoplastic disease; breast cancer; ovarian cancer; bladder cancer; lung cancer; globlastoma; stomach cancer; ovarian cancer; prostrate cancer; mumon-mediated inflammatory disease; rheumatorial cancer; immuno-mediated inflammatory disease; psortasis; restenosis; autoimmune disease; Crohn's disease; graft-host reaction; 9 9 Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid 1 DIQMIQSPSSLSASVGDRVIITCRASQGIRNDLGWYQQKPGKAPKRLIYAASSLQSGVPS 1 DIQMTQSPSSLSASVGDRVTITCRASQGIRNDLGWYQQKPGKAPKRLIYAASSLQSGVPS diseases such as rheumatoid arthritis, glomerulonephritis, atherosclerosis, psoriasis, restenosis, autoimmune disease, Crohn's disease, graft-host reactions, septic shock, cachexia, anorexia, and multiple sclerosis. New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid

3xample 10; SEQ ID NO 28; 213pp; English.

The present invention describes a human monoclonal antibody (I) that

C specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region I (CDR1) having the

two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421);

CC and (b) a light chain CDR1 having the two fully defined 11 amino acid

sequence (S1, ADP22418) or (S4, ADP22424). Also described: (I) assaying

(M1) the level of TNFa in a patient sample, comprising contacting with

(I), and detecting the level of binding between the antibody and TNFa in

the sample; (I) a composition comprising the antibody or its functional

(Eragment and a carrier; (3) are composition comprising the human

CC neoplastic, or an immuno-mediated inflammatory disease by selecting an

animal in need of treatment for the disease by administering the human

monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced

apoptosis in an animal by selecting an animal in need of treatment for

CTNFa induced apoptosis by administering the human monoclonal antibody of

CTNFa induced apoptosis by administering the human monoclonal antibody of

apoptosis in an animal by selecting an animal in need of treatment for

CTNFa induced apoptosis by administering the human monoclonal antibody of

apoptosis in an animal by selecting an animal in need of treatment for

CTNFa induced apoptosis by administering the human monoclonal antibody of

(1). (1) has anabolic, antiartering the human monoclonal antibody

confers, inmunomodulator, immunosuppressive, nephrotropic,

antibacterial, antinflammatory, antipsoriatic, antirtheumatic, antimocolonal antibody

confers, inmunomodulator, immunosuppressive, nephrotropic

as a TNFa antagonist. The antibody (I) is useful in the preparation of

conference oversian cancer, bander cancer, or immuno-mediated inflammatory

conference of the present sequence representes a human anti-TNFa

antibody light chain variable region, which is used in the

conference of the present invention.
